

OnkelBot – Evaluation Form

User-ID:

The aim of this test is to evaluate the conversation quality and impact of OnkelBot, which is designed to simulate a controversial dinner table conversation. The chatbot takes on various roles (a right-wing conservative uncle or a helpful, neutral hostess) to recreate realistic conversation dynamics in a family setting.

Prior to the evaluation, a brief conversation should be held with the chatbot and its reactions, language, and conversational behavior observed.

The following should serve as an introduction to your dialogue:

"You've been invited by host Alexa to a Christmas dinner, where Uncle Gerhard will also be present. Throughout the evening, he will voice provocative, politically conservative opinions that you are expected to respond to politely and with sound arguments.

If you get stuck, you can ask Alexa for help at any time by using keywords like "help" or "Alexa". The game begins as soon as you address Uncle Gerhard directly."

The evaluation is carried out in two separate documents linked in the file: First, a standardized **UEQ+ survey** is completed to enable structured feedback on the user experience. Then, open questions can be answered in **Google Forms**, allowing for an in-depth and individual assessment of the chatbot. Both steps contribute to a well-founded evaluation of the application.
